STORE, MONITOR & TRACK YOUR VOICE COMMUNICATIONS

Whether you are using a desk phone or a soft phone, you can stay connected in the office or even sitting on the beach. You can text or email your clients right from the dashboard. All you need is internet access and one of our customized phone numbers. Combined with our built-in CRM, Cyberwall Voip revolutionizes voice communications. With the built-in CRM, all calls will route into the correct customer profile, thus optimizing call center and marketing performance. This provides a complete view of what's generating calls and what's going on with the calls once your team members receive them through our unique dashboard.

Cyberwall Voip Business Phone Features

Call Recording

Save or upload your call list by any group you like, then send out a voice message to all numbers at one time. With voice broadcasting, you can send a message to recipients and generate calls in minutes.

Text Messaging

With Cyberwall Voip text feature, you can now text a client or applicant directly from your dashboard. With our texting feature, just click the text button and type in your message. That's it. When the person you are texting responds, the message will come back into your dashboard.

Mobile Phone Connection

Download the Cyberwall Voip mobile app to your android or iPhone, and your business calls will route directly to your mobile device. Many of the great features offered in Cyberwall Voip are available on your mobile phone.

IVR Functionality

Cyberwall Voip IVR menus are the initial audio greeting that directs callers which key to press to reach your web or desktop phones, groups or your voicemail, i.e. "Press 1 for sales...". Set up your menu with your customized recording to give important information, such as your company directory, business hours and any other important information you need to present.

Address Book

With the address book in Cyberwall Voip, you can transfer a call with one click, look up a co-worker and call that person with one click or email a call recording to anyone in your address book. You can also keep track of all your contacts in one place.

Analog Phones

If you don't want to invest money in a new phone system, that's not a problem. With Cyberwall Voip converter, you can turn your analog phones into your new VOIP system. Keep your old phones and receive all the features Cyberwall Voip has to offer.

Voicemail Caller Notification

With Cyberwall Voip caller notification, you can receive an email each time someone leaves you a voicemail. The recording will be instantly emailed to you with a link to your message. Simply click the link and hear who's calling. You will never miss a call.

User Extensions

Create unlimited user extensions. When you create a user, you can assign a unique user extension to be used for call routing. Each user will have their own unique number. Now you can add a unique extension.

**Make the best of your TIME, your TEAM,
and your TALENT with CyberWall Voip**

MANAGED IT SERVICES SIMPLIFIED

Cyberwall Voip, call tracking software will track and measure ROI of your ad campaigns. By using Cyberwall Voip you can instantly assign distinct phone numbers to your ads and start tracking your call analytics instantly. Below are many of the features that will help your sales department stay in touch with each and every client in real time.

Cyberwall Voip Business Phone Features

Call Tracking

Track and measure ROI of your ad campaigns. Instantly assign distinct phone numbers to your ads and start tracking your call analytics.

Global Reach & Numbers

We work with Tier-1 carriers to let you make voice calls to 200+ countries and buy local phone numbers from 50+ countries

99.95% Uptime & Reliability

Our Voice API scales with you as you grow. Our geographically distributed data centers and architecture ensure 99.95% uptime.

IVR Phone Menu

Powerful interactive voice response (IVR) systems let you customize and automate call flows with business logic that suits your business needs.

Voice Broadcast

Send personalized voice messages to your customers. Send broadcasts to the segmented list already in your data base.

Conference Calls

Execute a conference call that connects your team and customers on the same call.

Call Centers

Build your own customer call center on the Cloud with Cyberwall Voip API. Route call any way you like through customized call flows.

Voicemail Marketing

Build a voicemail solution to record, save and forward voicemails for your marketing team. We support both automatic and hybrid transcription services.

Dynamic Caller ID

Customize your Caller ID for outbound calls. Set any number that you would like to receive a callback from by using our simple REST Voice feature.

Call Recording

Record and store everything from a personal conversation to company conference call. Our secure servers keep your data safe and accessible anytime.

Voicemail To Text

When you receive your voicemail to your email, Cyberwall Voip has the ability to transcribe the recording.

Intelligent Call Control

Control your app call flow, including call forwarding, transferring, collecting inputs, playing music, send a voicemail, etc...

Call Queuing

Want to make a high number of call in a single API request? We will queue up all your calls and handle the call connection for you.

Robust Reporting

Our powerful and robust reporting provide you with visual analytics, chats and real-time data to help you with your daily marketing decisions.
